

CANTILEVER STORAGE RACKS

Company "All for stores and warehouses" offers to its clients cantilever storage racks!

Cantilever storage racks are used for long products: rods, pipes, profiles made of metals or plastics. Besides, they can be used as convenient storage facilities for chipboards, fencing segments and many other products or materials.

The „open“ rack structure and the unlimited length is a facilitation for the unrestricted storage space management, and this is independent of the ever-higher frequency of changing product types, models, variants, dimensions etc. Such changes and modifications are characteristic for the current world economy, with its orientation towards a quick adjustment to the varying customer expectations and customer-tailored offers.

The need for an unlimited variety of applications, a large scope of dimensions, and freedom of storage space design that's why we manufacture our racks from high-quality hot-rolled H profiles as the basic material for our racks. We always select the right materials in order to manufacture cantilever storage racks exactly to customer wishes, needs and requirements.

Our storage racks are of an uncomplicated basic structure. Despite that, they can be fitted with numerous accessories (limiters, separators, etc.) that support the order and safety for loading/unloading operations and facilitate an easy adaptation to the customer's varying needs.
